

**THE PROJECT**

DOBER LIDSKY MATHEY (DLM) helped Spelman define facility needs and prepared a Comprehensive Campus Plan as the College entered the 21st century. By 2004 many of the projects that were recommended had been completed as planned, and two tracts of land had been acquired. In the subsequent Site Study, DLM reviewed the earlier plan in light of what had been accomplished, defined current requirements and priorities, and recommended use for the additional land.

**CHALLENGE**

New facilities for athletics and recreation, fine and performing arts, additional student housing, and physical plant, as well as expanded parking are top priorities at Spelman College. Locating these elements on a site that is constrained, even with the new land, was a design challenge.

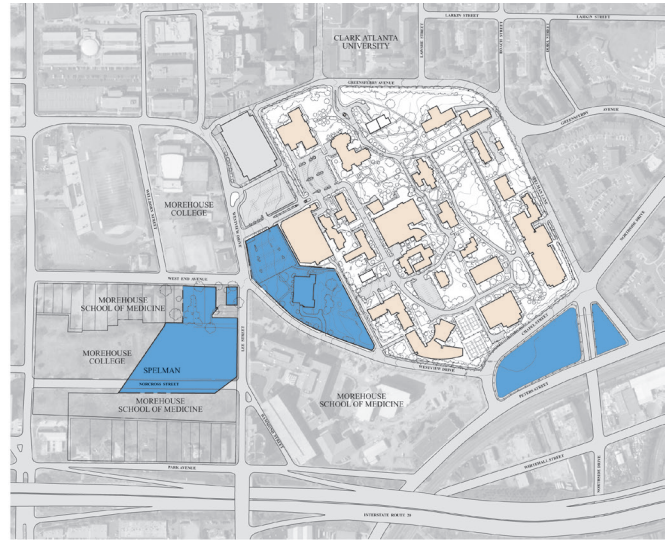

**SOLUTION**

The parcel of land that is suitable for the athletic and recreation and physical plant facilities is separated from the campus by a street, well below the level of the historic quadrangle. A campus extension will bridge over the street so that the disconnected area will, in fact, become contiguous with the existing campus. The other new land areas will accommodate a new Center for the Arts and student housing.

**RESULTS**

Over the past five years, a new science complex has been completed and renovations have occurred in seven buildings. In 2004, DLM completed a facility program for the Center for the Arts, which will be Spelman's next major new construction project.
